### KEY WORDS

*Foreign language, today's youth, benefits of foreign language.*

### ABSTRACT

*Benefits of foreign language to teach early childhood. Language as a communication tool and an important tool in the child's life. Through language, the child can interact, share experiences, and can improve the intellectual, in order to develop the knowledge and language skills. Through language, the child can interact, share experiences, and can improve the intellectual, in order to develop the knowledge and language skills. There are many ways that parents can do to teach foreign languages to children, one of them is to get children to use a foreign language in everyday life.*

Language is an inseparable part of human life, because by language a person can convey intentions and goals to others. In other words, language is a communication tool used by humans in their efforts to interact with each other. Language functions as a communication tool and is an important tool in children's lives. Through language, children can be interconnected, share experiences, and can improve intellectually, namely in the context of developing their language knowledge and skills. For children at an early age it is a period of development that must be fostered and developed so that they can make full use of their language abilities. Without guidance and direction, it is feared that their language development is not as expected by parents at home or by educators at school. Humans as social creatures always interact with others. Communication through language allows one to adjust to the surrounding environment. Language is unique and universal. Unique means to have characteristics or characteristics that are not owned by other languages and universal means to have the same characteristics that exist in all languages. Bilingualism is a person's ability to use or master two languages.

Learning a new language is fun and exciting. It also has wonderful benefits for children at school and in life. According to research, the best time to start is early in life so now all Year 3 students learn a language. By 2023, all students from Years 3 to 8 will learn a language.

Enhances literacy skills. Children develop a better understanding of English when they study a new language. They become more aware of grammar, conjugation and sentence structures. This helps them understand how English works, enhances their comprehension and accelerates their ability to read and write.

Improves memory and brain function. Learning a language strengthens the area of the brain which is responsible for memory, speech and sensory perception. Bilingual people are better at retaining lists, sequences, names and directions. They are also more creative, perceptive and can concentrate for longer.

Helps develop critical thinking and problem solving skills. Learning a language enables children to analyse information and solve problems better as they can select relevant information and ignore irrelevant or misleading information. They become more rational and objective decision makers.

Fosters respect and understanding of other cultures . Learning a new language nurtures curiosity and openness in children. They become aware of new cultures, and develop a greater understanding and appreciation of other people and customs that are different to their own. As they develop their language fluency, they increase their ability to communicate across cultures and interact positively with people from other countries.

Improves overall performance at school . Studies show that bilingual and multilingual children outperform other children who speak only one language. Academic results indicate this is especially true in reading, vocabulary and maths.

Creates employment and career opportunities. More and more companies are seeking staff who can speak more than one language. Bilingual staff are valued for their ability to communicate in the languages of their business partners and to cross important cultural barriers.

Enhances travel experiences. A person who is able to speak the language of the country they are visiting has more opportunities to enjoy the local culture. They are able to interact more with locals, interpret written information and travel with ease.

Language impacts the daily lives of members of any race, creed, and region of the world. Language helps express our feelings, desires, and queries to the world around us. Words, gestures and tone are utilized in union to portray a broad spectrum of emotion. The unique and diverse methods human beings can use to communicate through written and spoken language is a large part of what allows to harness our innate ability to form lasting bonds with one another; separating mankind from the rest of the animal kingdom.

The importance of communication is often overlooked. Despite our great prowess in communication, misunderstandings and mistranslations are commonplace. It is arrogant to believe that one can travel the world and expect all of mankind to understand his or her native tongue. In order to travel the world, whether for business or pleasure, a desire and willingness to adapt to new cultures and methods is necessary. Adaptability, of course, includes the ability to communicate with new people in various dialects. Being unable to communicate in a country is akin to living with a serious impairment; it is very difficult and near impossible, to adapt and get along with new people if there is no way to communicate with one another.

Additionally, the ability to communicate in multiple languages is becoming more and more important in the increasingly integrated global business community. Communicating directly with new clients and companies in their native language is one of the first steps to founding a lasting, stable international business relationship. Being able to do this automatically puts any multilingual person miles ahead of his or her peers in the competition for jobs and high-prestige positions. Language is such a key aspect to setting up children for

success in their future professional endeavors that high schools across the nation and in almost every Western country require at least two years of a foreign language.

The impact of multilingualism can be traced to even more fields. A doctor who can communicate with his or her patient in their native tongue is much more likely to have success at diagnosing them. A scientist or engineer capable of explaining his findings and ideas to his peers will be able to expedite and perfect their work, even if his peers could not understand him in his first language. Any hiring manager in any company in the world would tell you that the ability to speak a foreign language is a prized commodity. Learning to communicate fluently in multiple languages provides additional job security and advancement opportunities in uncertain economic times.

In order to prepare our nation's children to be the next generation of future entrepreneurs, doctors, scientists, engineers, or whatever influential job they choose, we must foster an environment from a young age that promotes multilingual learning. Through this we are setting up ourselves, our children, and our children's children, for growth, success, security, and ultimately, prosperity.

Therefore, it is up to you to create a warm and comfortable environment in which your child can grow to learn the complexities of language. The communication skills that your child learns early in life will be the foundation for his or her communication abilities for the future. Strong language skills are an asset that will promote a lifetime of effective communication.

In fact, there are many advantages of the studying foreign language. Knowing another language enriches our personal lives and gives us many new opportunities because we can communicate and connect with people of other cultures and nationalities. There is no doubt that we are living in times of great change. Nowadays the education of foreign language become is one of the important factors. Businesses and professions seek employees fluent in more than one language. Employers want their employees to be intercultural competent. Hence we can say that the language is a tool which is used in a transforming a culture. Language can be used in a learning our own or in a discovering new culture as well. Language helps us to be engaged with a new ways of life and patterns of new cultures, where we can communicate with someone from very far and different points in the world, which will make our life colorful and rich. Exposure to another culture through its culture will introduce us the new realms of ideas, customs and habits. It can help us to follow the international events with insight, opening us perspectives to make us an informed and responsible citizen of our country and of the world. Realizing new cultures will create good opportunities for exchange, cooperation and mutual benefit. Though we cannot imagine how much ethnic and cultural values differ through language, where language preserves the history and traditions of the people. Hence, such insider knowledge can achieve the cultural understanding.
