English-speaking businesses favor workers who can interact with customers, suppliers, and coworkers in the language. 1.Literature review. We exist in a technological era, which implies that we must confront growing demands for productivity as well as fresh and changing challenges. The need for skilled individuals is growing at an accelerating pace to satisfy the continually rising requirements of industry. Certainly, obtaining a job generally necessitates having at least a bachelor's degree. Although earning a degree from a four-year college is advantageous, it does not ensure a good job when the role depends on an individual's preferences and

requirements. Employers today seek employees who are well-educated and well-trained to ensure they can effectively aid in reaching the organization's objectives. The job market exclusively welcomes those who are highly skilled and possess a demonstrated history of achievement, whereas individuals missing these attributes face challenges in securing employment and developing a thriving career. A key qualification for prospective employees is their capability to communicate effectively. In assisting employees to capitalize on beneficial opportunities, efficient communication is crucial. According to Rahman (2012), achieving career success in today's globalized world heavily relies on an individual's proficiency in English and other essential professional skills. Potential candidates are anticipated to show proficiency in English as a lingua franca since it is commonly spoken. Job seekers worldwide are facing challenges due to their inability to communicate well in order to satisfy the demands of modern companies. Moreover, their insufficient command of English hinders them from obtaining fair salary packages and additional benefits (Bleakly & Chin, 2004). To satisfy the requirements of the business environment, employees need to be ready to perform at their highest level and be equipped for success (Tainer, 1988). Only individuals who have a strong command of English are taken into account for well-paying jobs, whereas, candidates who are able to communicate in the language proficiently. This is due to the fact that only someone fluent in English can solve technical problems. To understand the latest research and knowledge, it's essential to comprehend the language. Grasping an issue requires critical thinking, which can solely be developed through proficiency in the English language. In today's digitally transformed world, English greatly influences work environments, and this statement is not an overstatement (Debrah & Smith, 2002). Enhanced job prospects can be associated with the utilization of the target language and its impacts (Orbeta, 2002). These two elements combine to link individuals globally (Sassen, 2004). Numerous individuals, particularly immigrants, face challenges in communication due to their diverse linguistic backgrounds. This not only leads to shame, but also stops them from participating in the worldwide networking system.

2. English in the developing world. In many developing countries, the process of learning and teaching English as a foreign language has faced challenges stemming from students' views on the language. They've been unaware of their own long-term objectives, concentrating only on perfecting the English language to succeed in tests. It's quite usual for students to learn the content they must understand in their mother tongue or a language they are proficient in, neglecting or lacking exposure to English. Nonetheless, in the current world, the capability to communicate proficiently in English has turned into a necessity for both career and personal growth. Development can be perceived in numerous ways by individuals from various nations and (Gichohi, 2021) cultures. Common belief suggests that when poverty is eliminated, human rights, universal freedom, and self-worth are perceived as interconnected. This encompasses economic, physical, social, and mental wellness for the person. The area of education overall plays a notable role in fostering the development of both individuals and countries. Every subject Today, a majority of scientific articles, promotions for famous companies, digital communications, and global laws are composed in English (Graddol, 2000). Science, technology, and economics (STEM) are all carried out in English (Seidlhofer, 2003). Research by Grin (2001) indicates that proficiency in English enhances a person's earnings. Current globalisation trends are increasingly motivating migrant workers to pursue higher-paying jobs in English-speaking nations such as the United States, the United Kingdom, Australia, and Canada. Employees in developing nations employed by multinational companies due to inexpensive labor are expected to have some knowledge of English. As a result, Hasman (2004) contends that the employment of English by governments, businesses, and global entities is essential in the 21st century. As stated by Coleman (2010), English fulfills several crucial functions in development, such as improving job prospects, promoting global partnerships, enabling access to research and information, acting as a neutral language, and aiding the international movement of individuals like students, travelers, and workers. In the academic curriculum, including English, plays an important role in the execution of this procedure. Due to the diverse linguistic characteristics of their cultures and communities, many developing nations utilize English as a means of communication. This perspective can be demonstrated by the reality that the target aims of the Millennium Development Goals (United Nations, 2010) focus on

underdeveloped nations. It has been recognized that the English language significantly aids nations in their attempts to engage with and achieve the Millennium Development Goals.

3. Research methodology. Both descriptive and analytical research are relevant to the present Study. Consequently, the study is carried out with a historical perspective. The study depends on primary and secondary sources alike. A qualitative method has been employed to examine the secondary data collected from credible sources including books, internet websites, newspaper articles, and a range of international journals and magazines.

Sure! Please provide the text you would like me to paraphrase. As engineering students, we ought to possess English proficiency; however, numerous students still struggle with English due to the challenges they face. Just as it can be challenging for us to remember vocabulary, our infrequent use of English presents obstacles for students, particularly those in engineering fields. This is largely due to the numerous math lessons that detract from focusing on the significance of the English language. Listening is not as easy as people think, particularly when the English language has status as a foreign language that is different from a second language as well as first language. Particularly for those studying engineering, what makes English so vital. Currently, there are nearly no job options for engineering students lacking proficiency in English, as all global equipment employs English due to the international nature of these tools. As engineering students, if we do not make an effort to learn English, we will certainly not advance; we only acquire knowledge that cannot function cohesively due to a single issue. Therefore, it is essential for us to learn English to thrive in the international job market. If we are unable to do so, how can we expect to understand other subjects if we still struggle with language barriers? The challenge lies in the fact that engineering students often find it hard to remember vocabulary, as there is minimal motivation to study English, leading to a lack of effort in memorization because it seems overly complex. Everything needs a solution, and similar to us, by learning vocabulary, we can enjoy activities like watching our favorite movies while attempting to remember new words. Additionally, we can create a small note to track words that we seldom encounter, helping them become more familiar.
