KEY WORDS

distance education, face-to-face interaction, Internet, healthy lifestyle, depending on the situation, epidemiological regulations, negative aspects, faster way communication by e-mail.

ABSTRACT

During the pandemic, all educational institutions switched to distance learning. This article highlights the differences between distance education and traditional education, the pros and cons..

In our technological but pandemic period, it is essential to put into use distance education rather than traditional one as you know. Traditional training is based on learning from live face-to-face interaction with staff at a special room. Distance learning is somehow through live chats and video calls Internet. All assignments are submitted and checked online. There is no doubt about it, it is the most advanced educational system today. Many universities countries have opted for ICT-related online training. according to the practice of this system is becoming Internet connectivity and ICT knowledge more important than ever. Traditional education has been around for a long time and is still around both advantages and disadvantages. Face-to-face communication has its own characteristics an energy that binds both parties with motivation to study a particular field science or subject cross. In this case, students are involved in assignments those under the supervision of professors and teachers. He is a teacher observes how students perform on the exam task, which is fairer. Teachers and student has the opportunity to talk freely without fear of the Internet other technological problems. Students can be argumentative for long time discussions that discuss many issues. Students learn to make arguments and respond by looking the opposite party in the eyes, which creates self-confidence. In addition to the above points, traditional education is one of the best methods communicating with people, especially fellow students and teachers. Through live communication people make new friends and loved ones that they will never forget. Because the memory of studying at the university will never be forgotten student life. It is clear that they should spend this time effectively precious friends and teachers. They can show their way of thinking and behavior better. Another good thing about offline courses is its healthy lifestyle requires the student or

teacher to perform activities such as commuting having fun with others. It is better for everyone to be active and always on the move. However, some students may find it difficult to attend all courses for some reason. Unexpected things and traditional courses can go at the same time, we have to choose between them. In addition, we have epidemiological pandemic life can be dangerous not only for students as well as all university staff since not everyone acts epidemiological regulations required on campuses.

Distance education has reached its peak because we all need it study online. I think many advantages and gains can be seen. These are the following benefits: Students will have the opportunity to strive for excellence work while studying to earn money. In addition, distance learning helps to save money too. Students don't waste time on useless things like waiting bus, waiting in line for lunch. Instead, they are reliable and homemade food for lunch. Academically, students can learn independently at their own pace any disturbance. They think more carefully and cognitively, using large quantities they have time. Shy and introverted students will benefit greatly from it distance learning, they can experience assignments and other tasks. Without a doubt, we can emphasize that it is possible to study in distance education where and when. In addition to some routines, the student can take classes whenever he wants, depending on their situation. They are capable attending classes wherever they are. Sometimes this is the faster way communication with teachers in distance education by e-mail. Likewise, from I can relate my experience in this passage so that the student will get used to it start becoming more professional in technology and its use. This will be practice be influential in the subsequent future characteristics of the students as they become aware innovations in the age of technology. Of course, this makes it easier to find a good one creating a productive career that guarantees a bright and prosperous future.

On the other hand, distance learning must have some disadvantages is considered fair. It is natural that some problems or defects occur also using distance learning. We met some of them. One of the the most obvious is the poor state of the Internet connection around some parts a very inconvenient country to study and complete assignments given by teachers. In addition, the cost of internet is quite expensive for most students because they need additional equipment such as computers, laptops and smartphones at the same time to create different types of works such as presentation, video or audio. Without these tools, there would be no lesson. It can also be difficult to explain topic and assignment to the audience listening online. Students can do not fully understand homework and do it incorrectly. There is a possibility leading to misunderstandings with scores between students and professors. From whom our own experience of distance education, we can say that most students have problems with textbooks and the literature they use. Disadvantages of students being interrupted by parents and friends in distance education also.

We can conclude from all the above statements for the article, without exception, everything has two sides. A good choice accepting only the positive aspects and staying as far away from the negative aspects possible Both types of training are available when needed, depending on the situation it is valuable in raising the youth to be the perfect generation of the future.
